

Como instalar typescript no vscode

1. Operadores aritméticos

1. Subtração:

1. (-)

2. Soma:

1. (+)

3. Divisão:

1. (\)

4. Multiplicação:

1. (*)

5. Módulo — resto da divisão:

1. (%)

6. Exponenciação:

1. (**)

7. Incremento:

1. (++)

8. Decremento:

1. (--)

2.

3. ,

4. ;

5. :

6. !==

7. ()

8. [].indexOf()

9. {}

10. &&

11. `

12. <=

13. =

14. \${}

15. case

16. class

17. console.log

18. else

- 19. Error
- 20. export
- 21. function
- 22. if
- 23. is
- 24. new
- 25. number
- 26. private
- 27. protected
- 28. public
- 29. return
- 30. string
- 31. switch
- 32. this
- 33. throw
- 34. undefined

Exemplos

1. Calculadora:

1. Código typescript

```
export class Calculator {
  private current = 0;
  private memory = 0;
  private operator: string;
  protected processDigit(digit: string, currentValue: number) {
    if (digit >= "0" && digit <= "9") {
      return currentValue * 10 + (digit.charCodeAt(0) -
"0".charCodeAt(0));
    }
  }
  protected processOperator(operator: string) {
    if (["+","-","*","/"].indexOf(operator) >= 0) {
      return operator;
    }
  }
  protected evaluateOperator(
    operator: string,
    left: number,
    right: number
  ): number {
```

```
switch (this.operator) {
  case "+":
    return left + right;
  case "-":
    return left - right;
  case "*":
    return left * right;
  case "/":
    return left / right;
}
}
private evaluate() {
  if (this.operator) {
    this.memory = this.evaluateOperator(
      this.operator,
      this.memory,
      this.current
    );
  } else {
    this.memory = this.current;
  }
  this.current = 0;
}
public handleChar(char: string) {
  if (char === "=") {
    this.evaluate();
    return;
  } else {
    let value = this.processDigit(char, this.current);
    if (value !== undefined) {
      this.current = value;
      return;
    } else {
      let value = this.processOperator(char);
      if (value !== undefined) {
        this.evaluate();
        this.operator = value;
        return;
      }
    }
  }
  throw new Error(`Unsupported input: '${char}'`);
}
public getResult() {
  return this.memory;
}
}
export function test(c: Calculator, input: string) {
  for (let i = 0; i < input.length; i++) {
    c.handleChar(input[i]);
  }
  console.log(`result of '${input}' is '${c.getResult()}'`);
}
```
