

Hello World App

How to: Create and Run your first "Hello World!" Android App_

- [LAMW: Lazarus Android Module Wizard](#)
 - [demos/GUI](#)
- 1.0) From Lazarus IDE select "Project" -> "New Project"
 - 1.1) From [displayed dialog](#) select "[LAMW] GUI Android Module" and "Ok"
 - 1.2) Fill the [form/dialog](#) fields and "Ok" and "Save" to path that is showed ...
 - hint: "Path to Workspace" is your projects folder
 - hint: Accept "default" options! (but pay attention to the * signage)
 - hint: search your project folder... you will find many treasures there! (look for lazarus project in ".../jni" folder)
 - 1.3) From Lazarus IDE select "Run" -> "Build"
 - Success! Your sistem is up to produce your first Android Apk!
 - 1.4) From "Android Bridge" component tab select a [jImageView](#) and drop it on Form designer
 - set property: PosRelativeToParent = [rpTop, rpCenterHorizontal]
 - set property: ImageIdentifier = ic_launcher
 - 1.5) From "Android Bridge" component tab select a [jTextView](#) and drop it on Form designer
 - set property: PosRelativeToParent = [rpCenterInParent]
 - set property: Text = My First "Hello World!" App
 - 1.6) From "Android Bridge" component tab select a [jButton](#) and drop it on Form designer
 - set property: Anchor = jTextView1
 - set property: PosRelativeToAnchor = [raBelow]
 - set property: PosRelativeToParent = [rpCenterHorizontal]
 - set property: LayoutParamWidth = lpTwoThirdOfParent
 - set property: Text = Say Hello!
 - fire event property [OnClick](#) and write some code:

```
SowMessage( 'Hello Android World!' )
```

- 1.7) From Lazarus IDE select "Run" -> "Build"
 - Success! No bugs in the code!
- 1.8) Configure you phone device to [debug mode](#) and plug it to the computer usb port
 - Go to phone Settings -> more/additional -> Developer options and check:
 - (x) stay awake
 - (x) usb debugging
 - (x) verify apps via usb
- 1.9) Go to Lazarus IDE menu "Run" -> "[LAMW] Build Apk and Run"
 - Congratulations!
- 2.0) How to get more/others ".so" chipset builds
 - Google Play require APKs to include both 32 and 64 bits version of LAMW "*.so" libraries
 - From LazarusIDE menu:
 - Project -> Project Options -> Project Options -> [LAMW] Android Project Options -> "Build" -> Chipset [select!] -> [OK]
 - From LazarusIDE menu:
 - Run -> Clean up and Build...
 - From LazarusIDE menu:
 - [LAMW] Build Android Apk and Run
- 2.1) About LAMW components palettes:
 - [Android Bridges] and [Android Bridges Extra] need only "Ant" builder
 - [Android Bridges AppCompat] and [Android Bridges jCenter] are online libraries and need "Gradle" builder and Internet connection
