

GUI Design WYSIWYG

LAMW: Lazarus Android Module Wizard

How to design a GUI layout that shown same in real device?

- For visual components configure these properties:

- Anchor
- PosRelativeToParent
- PosRelativeToAnchor
- LayoutParamHeight
- LayoutParamWhidth

- **Example**

- 1 Put a **jTextView** component on *LAMW Form* and set properties:

```
PosRelativeToParent
rpCenterHorizontal = [True]
rpTop = [True]
Text = GUI Design WYSIWYG
//(Because only Position Relative to Parent(form) is need
to localize jTextView1)
```

- 2 - Put a **jEditText** component on *LAMW Form* and set properties:

```
Anchor = jTextView1
LayoutParamWidth = lpTwoThirdOfParent
PosRelativeToAnchor
raBelow = [True]
PosRelativeToParent
rpCenterHorizontal = [True]
Text = Ok

//(Because we want it to be bellow the jTextView1)
```

- 3 - Put a **jButton** component on *LAMW Form* and set properties:

```
Anchor = jEditText1
LayoutParamsWidth = lpTwoThirdOfParent
PosRelativeToAnchor
raBelow = [True]
PosRelativeToParent
rpCenterHorizontal = [True]
Text = Sample
//(Because we want it to be bellow the jEditText1)
```

- 4 - Hint:
 - To Change *width/height* of a visual component you should configure *LayoutParamsWidth* and *LayoutParamsHeight*!
