[By DonAlfredo]

Hi,

...I have added a Gradle option into build.gradle:

```
splits {  
    abi {  
        enable true  
        reset()  
        include 'arm64-v8a'  
        universalApk false  
    }  
}
```

To make a combined apk, build with Gradle use [something like] this:

```
splits {  
    abi {  
        enable true  
        reset()  
        include 'armeabi-v7a','arm64-v8a'  
        universalApk true  
    }  
}
```
